RHG9628 Series

IEC61850-3 Certified Rack-Mount High-Availability Managed Modular Gigabit Switch – Layer3

FEATURED HIGHLIGHTS

- Supports HSR (IEC 62439-3 Clause 5) and PRP (IEC 62439-3 Clause 4)
- IEC 61850-3 and IEEE 1613 certification
- Integrated IEEE 1588v2 hardware-based BC and TC (-BC/SB version)
- Maximum 128Gbps switching capacity, 95.24Mpps throughput
- Rugged industrial design for harsh environments between -40°C to +85°C
- Flexible modular configuration, 3 Module-dedicated slots
- Up to 24 Gigabit ports, and 4x10 Gigabit SFP Uplink slots, 1PPS BNC
- ITU-T G.8032 ERPS Ring, RSTP, or MRP (Manager/ Client) redundancy
- Advanced management features such as QoS and VLAN

PRODUCT DESCRIPTION

Flexibility: ATOP's high-density RHG9628 Rack-mounted managed switch provides the flexibility needed for your application demands. You can choose from among six different Core versions: based on power supply, uplink port configurations and embedded Hardware-Assisted Boundary Clock feature. And you can choose from six different 4- or 8-Port modules to customize your device in a very simple way.

Designed for Substations: Layer-3 routing support BGPv4, IPv4 static routing, RIP v1/v2 and OSPFv2.

Award-winning Performance: RHG9628's IEEE1588v2 Hardware-PTP version received recognition for nanosecond-level accuracy, This makes RHG9628 one of the most reliable GMC backups. And being embedded with Synchronous Ethernet and with full support for PTP profiles.

High-availability, versatility and power: When equipped with ***High-Availability HSR/PRP modules***, RHG9628 complies with the most stringent redundancy requirements, ensuring no packet loss and guaranteeing GOOSE packets arrive at their respective destinations. RHG9628's high performance provides a network redundant self-recovery mechanism of under 20ms on full load. This enables you to build a reliable network through almost any redundant ring topology. RHG9628 supports ITU-T G.8032 ERPS Ring, IEEE802.1D-2004 RSTP, STP, MSTP, MRP (Manager/ Client), iA-Ring, iA-Chain and many other compatible ring protocols for network redundancy. With a Multifunctional web dashboard, its offers intelligent features such as Quality of service (QoS), IGMP, port mirroring, and security.
It is available in two power input variants: one for low-DC voltage (redundant 24~120VDC input) and one for the more popular High-Voltage applications in the distribution grid (redundant 110~240VAC, 24~120VDC or 120~380VDC input). Additional 4 x 10 Gigabit uplink SFP slots allow RHG9628 to be the backbone of the substation.

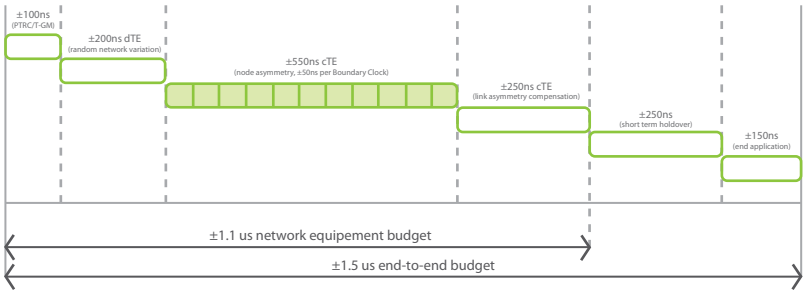
BOUNDARY CLOCK APPLICATION

High accuracy delivered, even in holdover mode

A boundary clock, is normally a switch that doesn't act transparently to the slaves in the network. Directly connected to the Grandmaster, large networks with thousands of slaves would overload the Grandmaster. So the need for a device that acts as a slave towards the master and as a master towards slaves is achieved with a boundary clock. ATOP's RHG9628 Boundary clock, once synchronized, achieves the 50ns precision set forth in the ITU-T G.8271.1 recommendation. And it is equipped with a high-precision OCXO to guarantee that precision in the event of a link or device failure, with a maximum time-drift of 250ns from GNSS time. All this can guarantee a maximum 1.5us end-to-end time deviation budget from the GNSS to the end-application, up to 10 BC hierarchies.



Application Example

The network diagram shows the use of ATOP's NTS7500 Grandmaster Clock and RHG9628 Boundary clock application.

RHG9628 can easily function as a both Access/Aggregation switch with up to 4x1/10Gbps SFP slots and as a PTP boundary clock. Up to 28 ports can be individually configured to run different instances of IEEE1588v2.

A wide variety of settings are allowed within profiles – such as the Power, and Enterprise profiles. RHG 9628-BS supports Synchronous Ethernet, allowing the transport of time and frequency, which is important for legacy networks such as SDH-SONET.

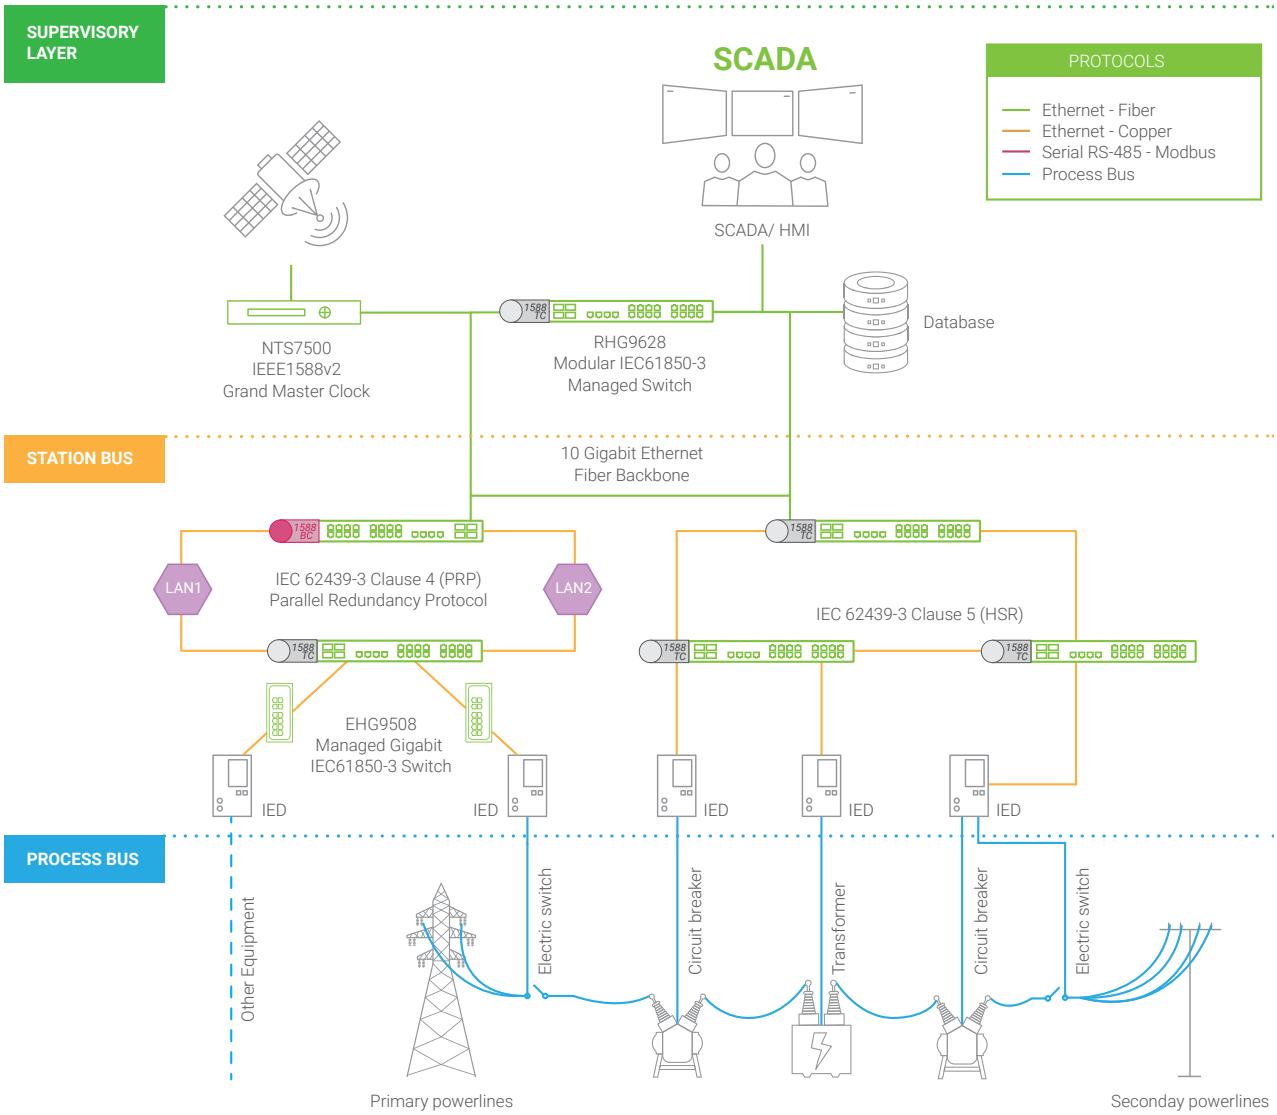
HIGH AVAILABILITY APPLICATION

Zero packet loss, on multiple ports

Install a 4-port Gigabit RJ45 or SFP High-Availability module in any of the module slots in RHG9628 CPU board, and you're good to go. Congratulations: your network is now fully compliant with IEC62439-3 Clause 4- 2016 (PRP) and IEC62439-3 Clause 5-2016 (HSR). Simultaneously. Though this 4-port module.

Through HSR/PRP technology, ATOP's device will replicate the packet through 2 redundant paths and the end-application will have the risks to lose a packet almost zeroed. This is an example of a mixed HSR/PRP network, where RHG9628 is used flexibly as a Transparent or a Boundary Clock and as an HSR/PRP manager.



IEEE1588v2 PTP, IEC61850-9-3 Power Profile and HSR/PRP

RHG9628 is an advanced and flexible platform. It embeds high-bandwidth Switching fabric, Accurate hardware-based Boundary Clock or Transparent Clock, IEC61850-3 compliant hardware, and fully supports IEC/IEEE61850-9-3 - 2016 Power Profile. Also on HSR/PRP ports. When properly configured, our Switch can seamlessly provide Peer-to-Peer transparent clock and Boundary Clock on all ports, HSR/PRP ports included.

CONFIGURATION EXAMPLE

RHG9628-410GSFP-SB-HV Main unit, with 4x 10 Gigabit SFP uplink slots,1PPS BNC, 120-380VDC, HW PTP BC/TC and SyncE

RHG9X28-M1
8-port Gigabit RJ45 module supporting IEEE1588v2 Hardware BC/TC.

RHG9X28-M5
4-port 10/100/1000Mbps RJ45 High-Avail. module, supporting HSR/PRP.

RHG9X28-M2
8-port Gigabit SFP module supporting IEEE1588v2 Hardware BC/TC.

IEC61850-3 certified Layer-3 Managed Switch, with 8 Gigabit ports, 4 10/100/1000 High-Availability HSR/PRP ports, 8 Gigabit SFP slots, one PPS output BNC (F) plug, and 4 x 10 Gigabit SFP uplinks, supporting IEEE1588v2 HW BC and Synchronous Ethernet.
