

# Industrial Ethernet Switches

---

*Product Selection Guide*

2021-2022

## Substations & Smart Grid

page 4

### System Requirements:

- Compliance with IEC61850-3, ensuring the best EMI shielding and communication without error
- Communication redundancy: ERPS and compatible Ring, STP/RSTP/MSTP/Master/Client
- Fiber optic uplinks for long-distance transmission, noise resistance, and huge bandwidth for upgrading
- Wide range of temperature support
- IEEE 1588 support
- Highest network availability in compliance with HSR/PRP.
- Security features based on IEEE 62443

### Atop solution:

- EH95xx
- EHG95xx
- RHG95xx
- RHG96xx

## RAILWAY & TRANSPORTATION

page 8

### System requirements:

- PoE at/af support
- IP67 or IP30 enclosure
- EN50155 & IEC60571 for Rolling stock certificated
- EN50121-4 for trackside certificated
- EN45545-2 for Fire protection
- NEMA TS-2 & E-Mark certificated for traffic control applications
- DNV GL certified for marine application
- Security features based on IEEE 62443

### Atop solution:

- |           |           |
|-----------|-----------|
| • EHG73xx | • RHG76xx |
| • EHG75xx | • EMG83xx |
| • EHG76xx | • EMG85xx |
| • RHG75xx | • EMG86xx |

## Industrial Automation & Process control

page 14

### System requirements:

- RSTP/ERPS... for network redundancy
- Wide range of operation temperature support
- Profinet CC-B certificated (EHG7504/08, EH75xx)
- Redundancy power supply
- Level-3 EMC protection
- IP30 metal housing with DIN-Rail /Wall mount (optional)
- Security features based on IEEE 62443 (Managed Switch)

### Atop solution:

- |           |           |
|-----------|-----------|
| • EH20xx  | • EHG75xx |
| • EH23xx  | • EHG76xx |
| • EH33xx  | • RHG75xx |
| • EHG64xx | • RHG76xx |
| • EHG65xx |           |

## OIL & GAS

page 20

### System Requirements:

- UL Class 1 Division 2 ATEX, and wide operating temperature capabilities
- Wide range of operation temperature support

### Atop solution:

- EHG73xx

# Substations & Smart Grid

## *Industrial Networking Solutions for the Power Industry*

Over the decades, various utility communication protocols have been developed to manage power grid networks and their components such as control centers, RTUs, and IEDs. Due to which different standards are adopted and used abundantly around the world. Distributed Network Protocol (DNP 3), principally in North America has emerged to achieve open, standards based interconnectivity between substation computers, remote terminal units, intelligent electronic devices and master stations for the electric utility industry. On the other hand, Europe has relied mainly on IEC 60870-5 101/103/104 to send/receive values with time stamps, and use other commands, while much of the world used Modbus protocol, designed for data exchange of one-bit binary registers or 16-bit registers.

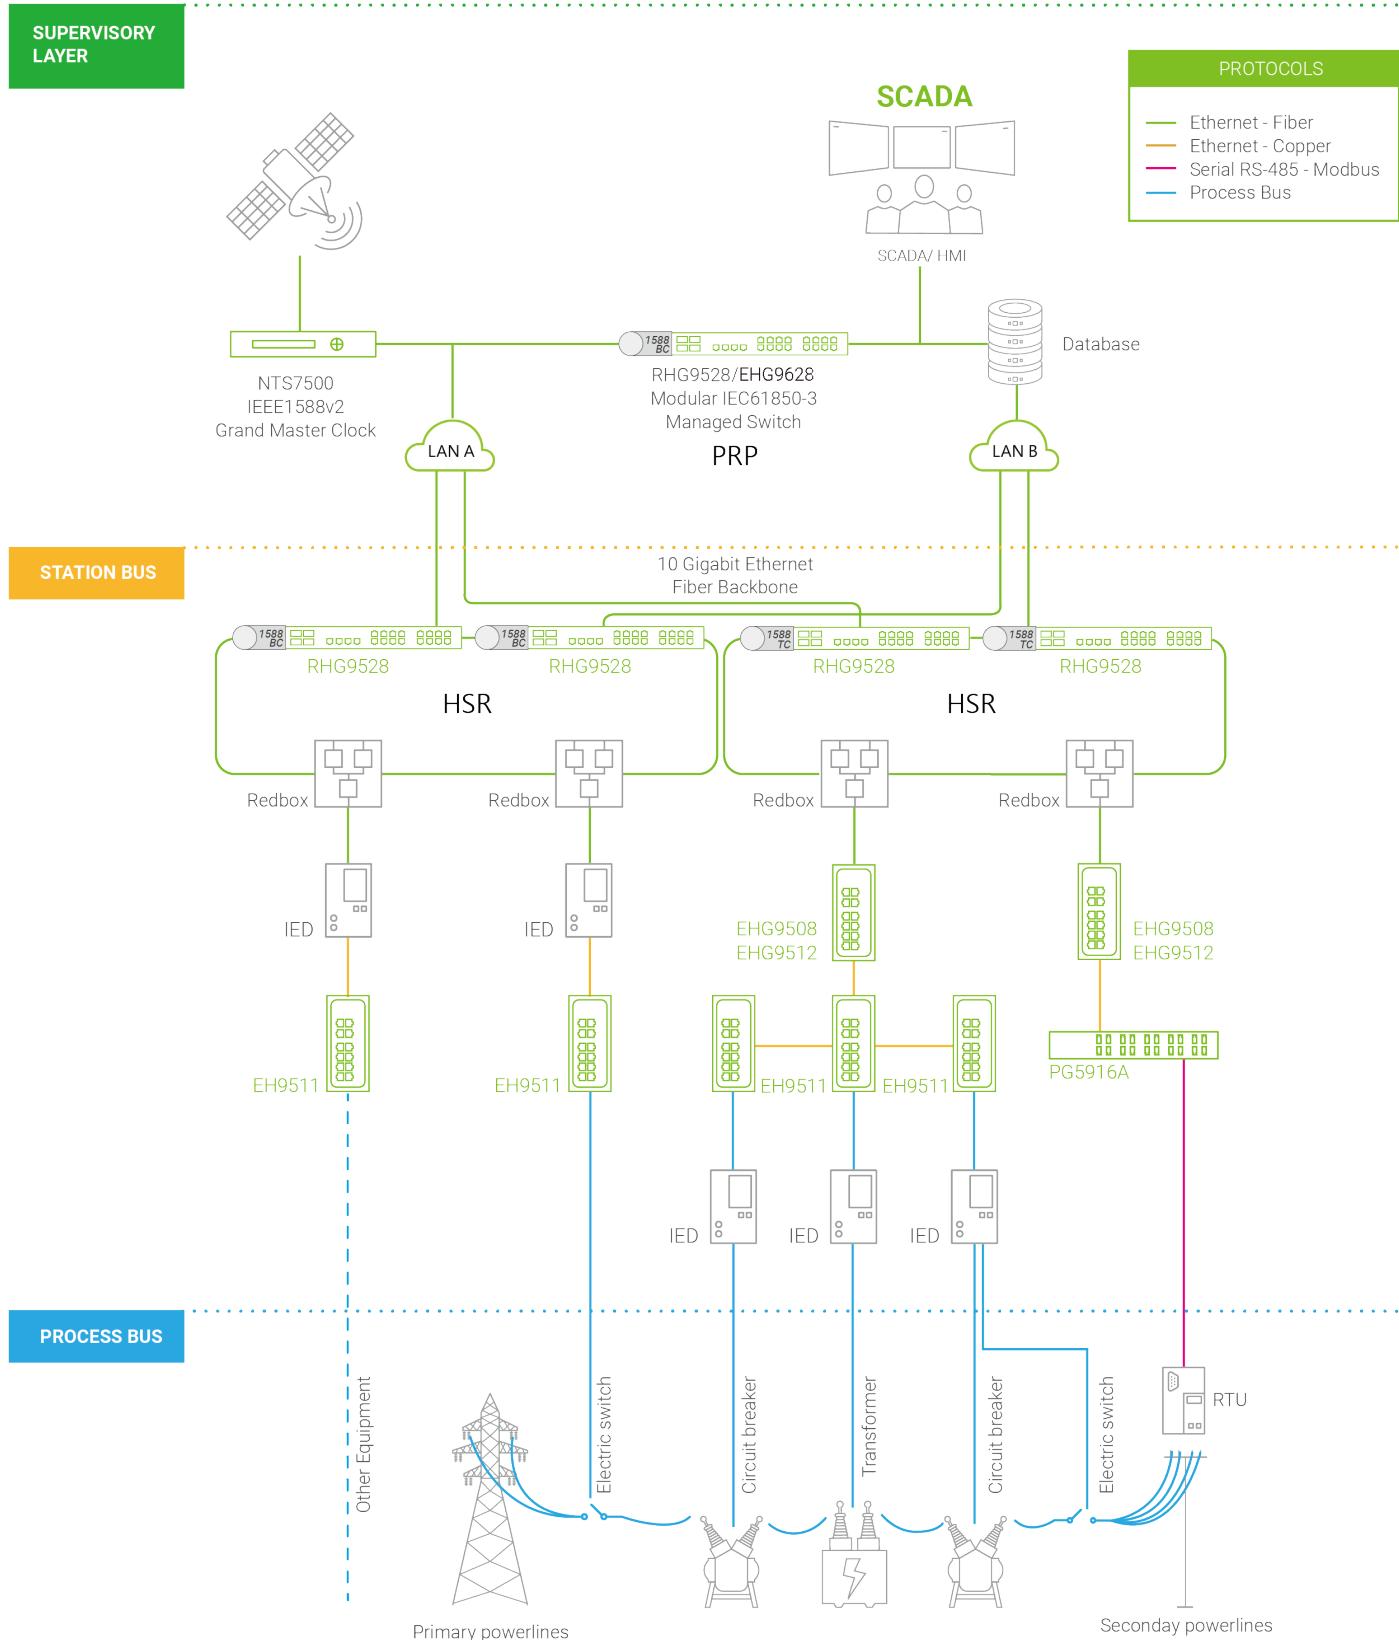

Thousands of manufacturers across the globe are using their own device of communications across wide spectrum of protocols. With many protocols, substations can't communicate with each other with regards to power transmission and distribution. With IEC 61850, developed to provide a standard defining communication protocol for electrical substations and power grid automation it enables integration of all protection, control, measurement and monitoring functions. By specializing its domain knowledge in electrical power grid systems, IEC 61850 works as an object-oriented protocol that uses a data modeling scheme to clearly describe each component of a power grid or substation as standard logical nodes — such as object processes, protection, control, and functionality.

This specialization enables data access to the power grid system to yield more details. To further improve reliability and performance, IEC 61850 Part 3 also specifies the hardware and network suitability requirements — such as electromagnetic immunity (EMI), surge protection, vibration and shock resistance, and the temperature range in which devices must be able to function. **ATOP's switches comply with these specifications.**

## **IEC 61850-3 Device Compliancy Specifications require the device to:**

- a. Operate in a temperature range from -40°C to 75°C.
- b. Be capable of reliably handling long distance transmissions through Fiber optic connectivity.
- c. Guarantee QoS (Quality of Service) management and real-time packet switching for GOOSE event messages.
- d. Guarantees a level of redundancy that minimizes packet loss. Ring topologies should be supported, and zero-packet-loss technologies such as HSR (High availability Seamlessly Redundancy) or PRP (Parallel Redundancy Protocol) are strongly recommended to be supported. ATOP's devices support RSTP (Rapid Spanning-Tree Protocol) and ERPS rings. When equipped with HSR/PRP modules, our innovative RHG9528/RHG9628 switch can guarantee no loss of GOOSE packets.
- e. Have a wide tolerance for vibrations and shocks. ATOP's MIL-STD-810F device fully complies.
- f. Have tough electromagnetic immunity and comply with emission standards.
- g. Have at least Level 3 EMC protection; have at least Level 4 ESD, EFT and Surge protection; and have at least Level 5 PFMF and Damped Oscillatory Magnetic Field immunity.

## IEC61850-3 Certified Managed Switches

# Railway & Transportation

*Industrial Networking for Railway, Public transportation and Marine*

## Railway and Trackside Made Easy

*Industrial Networking for Railway transportation*

Defining certain criteria that network devices must comply with when installed on trains include environmental, shock, power supply, vibration, power supply, humidity, electromagnetic interference, wide temperature range, EMC, power surge, electrostatic discharge (ESD) and transient factors.

**EN 50155** is recognized internationally as a standard for covering electronic equipment in railway applications.

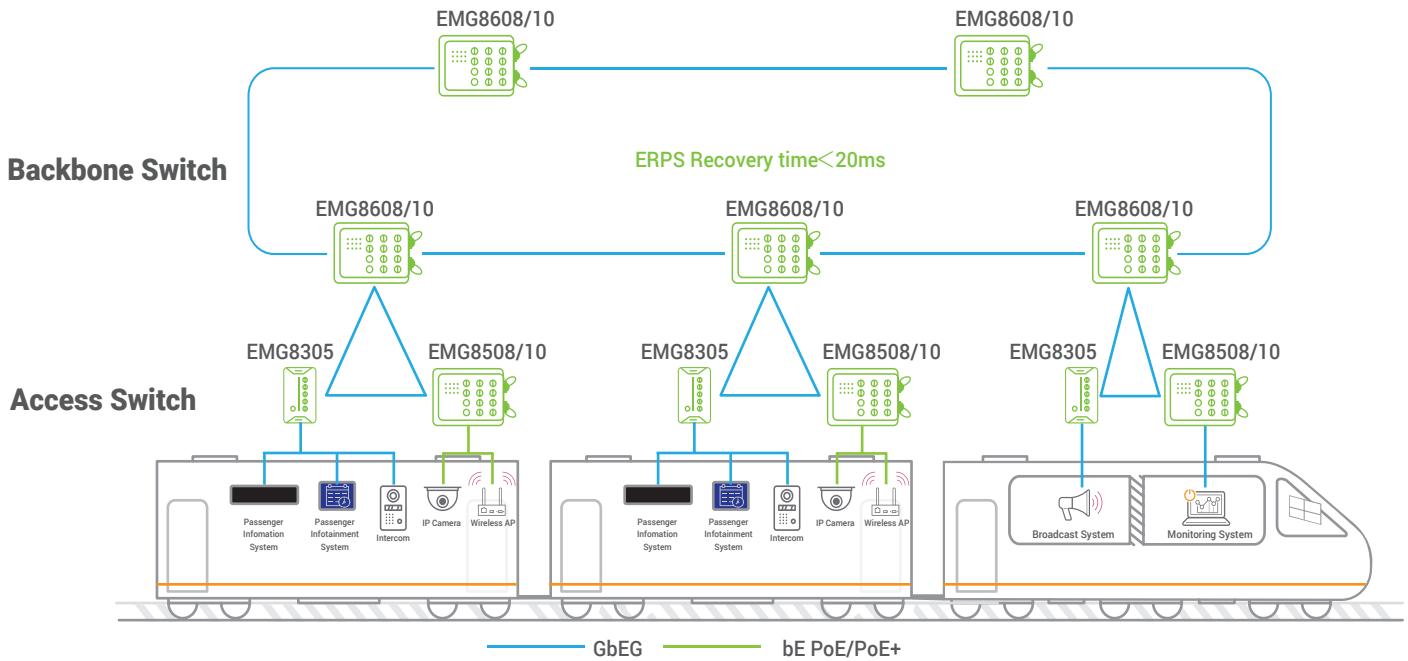

Complying with EN50155 and with the essential sections of **EN50121-4** for ground equipment, ATOP's railway-certified switches are powerful industrial ethernet switches with advanced features that are encased in robust and reliable housing, making them highly suitable for use in signal control networks and on-board applications.

## Temperature Requirements

Category	Internal cabinet temperature range	Ambient board temperature range	GAIA converter modules temperature range
T1	-25/55 °C	-25/70 °C	Industrial line: -40/71 °C ambient
T2	-40/55 °C	-40/70 °C	Industrial line: -40/71 °C ambient
T3	-25/70 °C	-25/85 °C	Hi-rel line: -40/85 °C ambient
T4	-40/70 °C	-40/85 °C	Hi-rel line: -40/85 °C ambient

# Public transportation and Traffic Control

## Industrial Networking for ITS

ATOP Fast-Ethernet and Gigabit Managed Switches obtained NEMA TS2 certification! NEMA TS2 is a standard for traffic control assemblies, such as traffic lights, emergency road condition signs and walk/don't walk signs. It is a fundamental standard for all devices that are to be used in smart cities in traffic management applications and in ITS (Intelligent Transportation System).

In our continuing endeavor to bring to our customers Industrial Networking products that have a wider range of Hardware platforms that are rich in features we are proud to announce an additional certification obtained by our Gigabit and Fast-Ethernet managed Switches.

NEMA TS2 is a standard for traffic control assemblies, such as traffic lights, emergency road condition signs and walk/don't walk signs. It is a fundamental standard for all devices that are to be used in smart cities in traffic management applications and in ITS (Intelligent Transportation System). The standard defines minimum requirements for resistance to high/low temperature, high humidity, vibration, and mechanical shock.

# Marine

## *Networking solutions for the connected vessel*

Det Norsek Veritas(DNV) and Germanischer Lloyd(GL) set standards for ships and offshore structure which comprise safety, reliability, and environmental requirements for the switch internationally.

Atop certified by DNV.GL for EHG9508/12 and EHG75 series Industrial Managed Gigabit Switch Series.

# Industrial Automation & Process control

## Entry Level

ATOP's entry level din-rail mount Unmanaged Switches offer a reliable, robust and cost-effective solution for simple network topologies offering features such as PoE connectivity and performance in harsh environments. IP30-rated, all of them are certified for Industrial EMC (**EN61000-6-4** and **EN61000-6-2**). They are built with either industrial plastic, steel or aluminium housing to suit different application environments for industrial environments, such as in hazardous locations that comply with FCC, TUV, UL, and CE standards. They operate in temperatures ranging from -10°C to 70°C, with units with plastic housing supporting an operating range of 0°C to 60°C. For enhanced safety and backup, redundant power supplies are featured on every model. Our products feature 4 to 8 Fast Ethernet or Gigabit Ethernet ports. Selected versions have single-mode or multi-mode Fiber optic uplink, and selected versions feature Power over Ethernet (PoE) and Gigabit speeds.

## Harsh Environments

By offering both **Layer 2** and **layer 3** options, ATOP's most advanced, fault tolerant product lines offer hundreds of different possible configurations. Our Harsh environment switches are the best choice to support highly demanding networks – in highly demanding environments. They feature 4 to 28 Fast Ethernet, Gigabit or 10 Gigabit ports, an operating temperature range from -20°C to 70°C or wider, **PoE/PoE+** ports, Relay Output, Redundant power input, Profinet Packet Prioritization (for Unmanaged Switches), and Profinet CC-B v2.33 certification (EH75xx, EHG7504/EHG7508). Selected products offer MIL-STD shock and vibration certification, in high humidity and operating temperatures of between **-40°C to 75°C**.

Being **Profinet CC-B v2.33 certified**, this switch Series is Automation and IoT ready.

Engineered for reliable performance in harsh industrial environments, ATOP's Layer-2 Managed Switches enable advanced network management, with features to maximize network performance and minimize downtimes. Our Managed Switches support **ERPS, RSTP, STP and MSTP redundancy**

**protocols**, enable Precision time Synchronization with IEEE1588 Precision Time Protocol. It provides you the ability to manage networks efficiently by SNMP, Web, Telnet or Console. QoS, VLAN and many more functionalities allow bandwidth optimization, increased security and more.

Layer-3 Switches provide an ideal solution for scaling up industrial networks or large surveillance applications. They support IPv4 Static Routing, RIPv1 and RIPv2, OSPFv2, BGP and multicast protocols such as PIM-DM, PIM-SM and DVMRP. With higher port density and faster switching capabilities ATOP BGP Layer-3 switches route data packets without making extra network hops, thus making it faster than routers.

To confront the increasing number of cyber incidents, system integrators have to prove that their network devices meet the technical requirements defined in the relevant guidelines of the IEC 62443 standard. The solutions must include enhanced component-level security and a mechanism to manage the security level of devices.

Atop Security Solution can meet the technical requirements defined in the IEC 62443 standard which protects the overall security of networks. Atop is going to get the certification of IEC 61443-4-1 by end of the 2021.

# Oil & Gas

## In hazardous environments, guaranteeing safety

The important assets of oil and gas need the highest level of performance, reliability, and safety from components operating in demanding conditions. Utilizing non-sparking components in dangerous environments is the best policy to guarantee safety. In order to achieve the standard of UL Class I Division II and ATEX, Atop designs the hazardous series with Industrial solution in gas, oil, and mine related environments. These places are full with flammable gases, liquids, vapors, and combustible dusts. In addition, we classified apparatus that has no normally arcing parts or these areas in hazardous environments because disasters may be caused with only one small spark. To guarantee the safety thermal effects capable of ignition and the safety of property and people. Atop releases EHG73xx series switches to fulfill this kind of applications. These series can be deployed in components which are hermetically sealed hazardous or explosive condition without increasing the risk of explosion or accelerating the damage if an accident occurs.

Atex certification

General Information			
Model Number	EHG7305	EHG7306	EHG7307
Number of ports			
Total number of ports	5	6	7
Fast Ethernet 10/100 BaseT(X)	-	-	-
Fast Ethernet Fiber ports (SFP, LC or ST)	-	-	-
Gigabit 10/100/1000 BaseT(X)	5	5	5
Gigabit 100/1000Base-X SFP	-	1	2
Gigabit 1000Base-X SFP	-	-	-
MACsec 802.1AE secure ports	-	-	-
PoE/PoE+ ports	Max 4	Max 4	Max 4
Power Supply input			
Power input	12~57V (PoE from 12V)	12~57V (PoE from 12V)	12~57V (PoE from 12V)
Power input (High-Voltage option)			
Power Redundancy	•	•	•
Relay output	•	•	•
Mechanical			
Housing	Metal	Metal	Metal
Installation	DIN-Rail	DIN-Rail	DIN-Rail
Ingress Protection	IP30	IP30	IP30
Dimensions (L x W x H) mm	32 x 90 x 110	45 x 90 x 110	45 x 90 x 110
Supported Temperatures			
Operations Temperature	-40~70° C	-40~70° C	-40~70° C
Storage Temperature	-40~85° C	-40~85° C	-40~85° C
Network Redundancy			
STP/RSTP/MSTP			
ITU-T G.8032 ERPS Ring			
MRP (Client)			
Protocols			
SNMPv1/v2c/v3			
Modbus TCP			
IEEE802.1ad LACP Port Trunking			
IEEE802.1p QoS			
IEEE802.1q VLAN			
IEEE802.1x for Authentication			
IEEE1588v2 Hardware-based E2E TC			
IGMPv1/v2/v3 IGMP Snooping			
DHCP Option 66/67/82			
IPv4/IPv6			
ACLs			
GARP, GVRP, GMRP			
Layer-3 Switching (Static, RIP, OSPF)			
Compliance			
UL/EN/IEC(CB) 60950-1 and/or 62368-1			
EN60950-1 and/or EN62368-1	•	•	•
UL61010-2-201	•	•	•
Atex Zone 2 - UL C1D2	•	•	•
E-Mark			
NEMA TS2			
Marine (DNV,GL)			
EN50155/ EN50121-4	•	•	•
