

EMC TEST REPORT

Equipment : Industrial Wireless Router
Brand Name : Atop
Model Name : AWR5805P/AWR5805
Applicant : Atop Technologies, Inc.
1F, No. 30 R&D Rd. II, Science-Based Industrial Park,
Hsinchu 30076, Tawian , R.O.C
Manufacturer : Atop Technologies, Inc.
1F, No. 30 R&D Rd. II, Science-Based Industrial Park,
Hsinchu 30076, Tawian , R.O.C
Standard : EN 301 489-1 V2.2.3 (2019-11) Class A
EN 301 489-17 V3.1.1 (2017-02)
EN 55032:2015+A11:2020 Class A
EN 55024:2010+A1:2015
EN 55035:2017+A11:2020

The product was received on Aug. 23, 2022, and testing was started from Nov. 01, 2022 and completed on Nov. 08, 2022. We, Sporton International Inc. Hsinchu Laboratory, would like to declare that the tested sample has been evaluated in accordance with the procedures given in above standards and shown compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of Sporton International Inc. Hsinchu Laboratory, the test report shall not be reproduced except in full.

Note 1: For powered by PoE: The EUT was powered by PoE, and the PoE was for measurement only, would not be marketed. Thus, it's not necessary to apply to Harmonic Current emission, Voltage Fluctuations, EFT (AC power port), Surge (AC power port), CS (AC power port) and DIP tests.					
Note 2: According to EN 55024 / EN 55035 Table 2 description, the surge test of telecommunication/signal cable test only for directly connect to outdoor cables, thus indoor telecommunication/signal port didn't necessary to be surge test.					
Note 3: The EUT is without xDSL ports, so it's not necessary to apply to Broadband impulsive conducted disturbances test.					

Declaration of Conformity:

1. The test results with all measurement uncertainty excluded are presented in accordance with the regulation limits or requirements declared by manufacturers. It's means measurement values may risk exceeding the limit of regulation standards, if measurement uncertainty is include in test results.
2. The measurement uncertainty please refer to report "Measurement Uncertainty".

Comments and Explanations:

The declared of product specification for EUT presented in the report are provided by the manufacturer, and the manufacturer takes all the responsibilities for the accuracy of product specification.

1. General Description of Equipment under Test

Product Detail	
Equipment Name	Industrial Wireless Router
Model Name	AWR5805P/AWR5805
Brand Name	Atop
Power Supply	For EUT 1 (AWR5805P): From DC internal power supply or PoE
	For EUT 2 (AWR5805): From DC internal power supply

1.1. Feature of Equipment under Test

1. The EUTs support WLAN 2.4GHz/5GHz function.
2. Accessories: DC jack*1
3. The difference for each model is show as below:

EUT	Model Name	PoE Function
1	AWR5805P	V
2	AWR5805	X

Note: The above information was declared by manufacturer.

4. For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

2. Test Configuration of Equipment under Test

2.1. Test Mode

The following table is a list of the test modes shown in this test report.

Conducted Emissions	
Test Mode	Description
1	Normal link: EUT 2_DC internal power supply
2	Normal link: EUT 1_DC internal power supply
3	Normal link: EUT 1_PoE
Mode 3 generated the worst test result, so it was recorded in this report.	

Disturbances at Telecommunication Ports	
Test Mode	Description
1	Normal link: EUT 2 + WAN port / 1 Gbps_DC internal power supply
2	Normal link: EUT 2 + LAN port 1 / 1Gbps_DC internal power supply
3	Normal link: EUT 1 + WAN port / 1 Gbps_DC internal power supply
4	Normal link: EUT 1 + LAN port 1 / 1Gbps_DC internal power supply
5	Normal link: EUT 1 + LAN port 4 / 1Gbps_DC internal power supply
6	Normal link: EUT 1 + WAN port / 1 Gbps_PoE
7	Normal link: EUT 1 + LAN port 1 / 1Gbps_PoE
8	Normal link: EUT 1 + LAN port 4 / 1Gbps_PoE
Mode 1 and Mode 4 generated the worst test results, so they were recorded in this report.	

Radiated Emissions below 1GHz	
Test Mode	Description
1	Normal link: EUT 2 in Y_DC internal power supply
2	Normal link: EUT 2 in Z_DC internal power supply
Mode 2 has been evaluated to be the worst case among Mode 1~2, so measurement for Mode 3 ~ 4 will follow this same test mode.	
3	Normal link: EUT 1 in Z_DC internal power supply
4	Normal link: EUT 1 in Z_ PoE
Mode 4 generated the worst test result, so it was recorded in this report.	

Radiated Emissions above 1GHz	
1. Mode 2 generated the worst test results for EUT 2 in Radiated emission below 1GHz test, so the measurement for Radiated emission above 1GHz test will follow this same test configuration. 2. Mode 4 generated the worst test results for EUT 1 in Radiated emission below 1GHz test, so the measurement for Radiated emission above 1GHz test will follow this same test configuration.	
Test Mode	Description
1	Normal link: EUT 2 in Z_DC internal power supply
2	Normal link: EUT 1 in Z_ PoE
Mode 2 generated the worst test result, so it was recorded in this report.	

ESD 、 RS 、 EFT 、 Surge 、 CS 、 PFMF	
Test Mode	Description
1	Normal link: EUT 2_DC internal power supply
2	Normal link: EUT 1_DC internal power supply
3	Normal link: EUT 1_PoE

Note: The PoE and adapter were for measurement only and would not be marketed. Their information is showed as below:

Equipment	Brand	Model	FCC ID	Remark
PoE	Atop	IJG7001	N/A	-
Adapter	UNIFIVE	US315-12	N/A	Used with PoE

2.2. Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

For EMI test:

For Conducted Emissions and Disturbances at Telecommunication Ports test:

No.	Support Unit	Brand	Model	FCC ID
A	PoE	Atop	IJG7001	N/A
B	Micro SD Card	Transcend	TS16GUSDHC10	N/A
C	POE IN NB	DELL	E6430	N/A
D	2.4G NB	DELL	E6430	N/A
E	5G NB	DELL	E6430	N/A
F	WAN NB	DELL	E6430	N/A
G	LAN1 NB	DELL	E6430	N/A

For Radiated Emissions test:

No.	Support Unit	Brand	Model	FCC ID
A	PoE	Atop	IJG7001	N/A
B	LAN NB	DELL	E6430	N/A
C	2.4G NB	DELL	E6430	N/A
D	5G NB	DELL	E6430	N/A
E	WAN NB	DELL	E6430	N/A
F	Micro SD Card	Transcend	TS16GUSDHC10	N/A

For EMS test:

For Mode 1~2:

No.	Support Unit	Brand	Model	FCC ID
A	Power Supply	Advanced	LPS-305	N/A
B	Micro SD Card	Transcend	TS16GUSDHC10	N/A
C	LAN NB	DELL	E6430	N/A
D	2.4G NB	DELL	E6430	N/A
E	5G NB	DELL	E6430	N/A
F	WAN NB	DELL	E6430	N/A

For Mode 3:

No.	Support Unit	Brand	Model	FCC ID
A	PoE	ATOP	IJG7001	N/A
B	Micro SD Card	Transcend	TS16GUSDHC10	N/A
C	PoE IN NB	DELL	E6430	N/A
D	2.4G NB	DELL	E6430	N/A
E	5G NB	DELL	E6430	N/A
F	WAN NB	DELL	E6430	N/A

2.3. EUT Operation Condition

<EMI>

During the test, the following programs under Win 7 were executed:

The remote NB executed "Telnet" to link with the EUT to confirm the read and write status from the SD card.

The remote NB executed "telnet" to bridge the WAN & LAN function.

The remote NB executed "ping.exe" to link with the EUT to maintain the connection by LAN, WAN and WLAN.

For Disturbances at Telecommunication Ports test:

At the same time, the remote notebook executed "Nuwin" to link with the EUT to traffic packet data by LAN and WAN.

<EMS>

During the test, the following programs under Win 7 were executed:

The remote NB executed "Telnet" to link with the EUT to confirm the read and write status from the SD card.

The remote NB executed "telnet" to bridge the WAN & LAN function.

The remote NB executed "ping.exe" to link with the EUT to maintain the connection by LAN, WAN and WLAN.

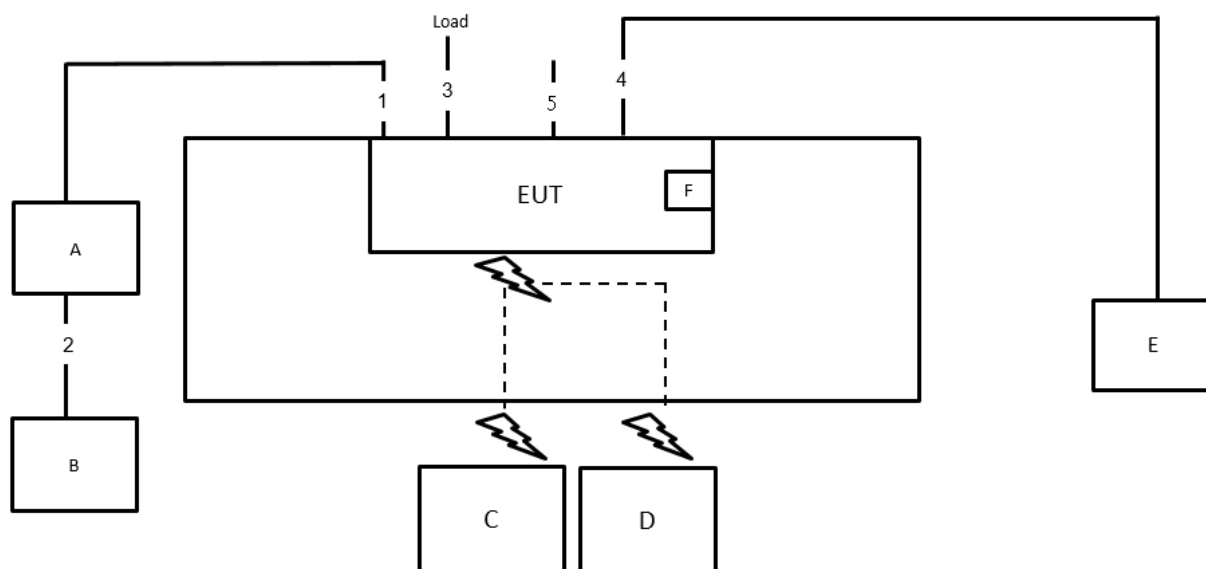

2.4. Connection Diagram of Test System

2.4.1. AC Power Line Conduction Emissions Test Configuration

Item	Connection	Shielded	Length
1	Power cable	No	1.8m
2	RJ-45 cable	No	10m
3	RJ-45 cable	No	1m
4	RJ-45 cable*2	No	1.5m
5	Ground cable	No	1.8m
6	RJ-45 cable	No	10m
7	RJ-45 cable	No	10m

2.4.2. Radiation Emissions Test Configuration

Item	Connection	Shielded	Length
1	RJ-45 cable	No	10m
2	RJ-45 cable	No	3m
3	RJ-45 cable*3	No	1.5m
4	RJ-45 cable	No	10m
5	Ground cable	No	1.8m

3. General Information of Test

3.1. Test Facility

EMI / EMS		
Test Lab. : Sporton International Inc. Hsinchu Laboratory		
Hsinchu	ADD: No.8, Ln. 724, Bo'ai St., Zhubei City, Hsinchu County 302010, Taiwan (R.O.C.)	
(TAF: 3787)	TEL: 886-3-656-9065	FAX: 886-3-656-9085

3.2. Test Environment

Test Items	Test Site No.	Test Engineer	Test Environment			Test Date	Remark
			Temp (°C)	Humidity (%)	Pressure (kPa)		
AC Power Port Conducted Emission	CO01-CB	Tim Chen	23~24	58~59	-	Nov. 02, 2022	-
Telecommunication Port Conducted Emission	CO01-CB	Tim Chen	23~24	58~59	-	Nov. 02, 2022	-
Radiated Emission below 1GHz	10CH01-CB	Ryan Huang	22~23	57~58	-	Nov. 01, 2022	-
Radiated Emission above 1GHz	10CH01-CB	Ryan Huang	22~23	57~58	-	Nov. 01, 2022~ Nov. 02, 2022	-
ESD	ES01-CB	Dean Chang	22~23	52~53	101	Nov. 08, 2022	-
RS	RS01-CB	Bob Chang	22~23	55~57	-	Nov. 07, 2022	-
EFT	EX02-CB	Joe Chu	21~23	55~57	-	Nov. 04, 2022	-
Surges	EX02-CB	Peter Wu	22~23	57~58	-	Nov. 08, 2022	-
CS	EX01-CB	Bob Chang	23~24	57~58	-	Nov. 03, 2022	-
PFMF	EX02-CB	Joe Chu	21~23	55~57	-	Nov. 04, 2022	-

3.3. Test Voltage

Power Type	Test Voltage
AC Power Supply	230 V / 50 Hz

3.4. Frequency Range Investigated

EMI Test Items	Frequency Range
Conducted emission test	150 kHz to 30 MHz
Radiated emission test	30 MHz to 6,000 MHz
EMS Test Items	Frequency Range
Radio frequency electromagnetic field immunity test	80 MHz to 6,000 MHz (Spot test: 1800 MHz / 2600 MHz / 3500 MHz / 5000 MHz)
Conducted immunity test	150 kHz to 80 MHz

3.5. Test Distance

Test Items	Test Distance
Radiated emission test below 1 GHz (30 MHz to 1,000 MHz)	10 m
Radiated emission test above 1 GHz (1,000 MHz to 6,000 MHz)	3 m
Radio frequency electromagnetic field immunity test	3 m

4. Test of Conducted Emission

4.1. Limit

4.1.1. Limit for AC power ports :

Frequency (MHz)	QP Limit (dBuV)	AV Limit (dBuV)
0.15~0.5	79	66
0.5~30	73	60

4.1.2. Limit for Telecommunication ports :

Frequency (MHz)	Voltage Limit (dBuV)		Current Limit (dBuA)	
	QP	AV	QP	AV
0.15~0.5	97~87	84~74	53~43	40~30
0.5~30	87	74	43	30

4.2. Test Procedures

- a. The EUT was placed on a desk 0.8 meters height from the metal ground plane and 0.4 meter from the conducting wall of the shielding room and it was kept at least 0.8 meters from any other grounded conducting surface.
- b. Connect EUT to the power mains through a line impedance stabilization network (LISN).
- c. Connect Telecommunication port to ISN (Impedance Stabilization Network).
- d. All the support units are connect to the other LISN.
- e. The LISN provides 50 Ω coupling impedance for the measuring instrument.
- f. The CISPR states that a 50 Ω , 50 μ H LISN should be used.
- g. Both sides of AC line were checked for maximum conducted interference.
- h. The frequency range from 150 kHz to 30 MHz was searched.
- i. Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

4.3. Measurement Results Calculation

The measured Level is calculated using:

For AC Power Port Conducted Emission

- a. Corrected Reading: LISN Factor (LISN) + Attenuator (AT/AUX) + Cable Loss (CL) + Read Level (Raw) = Level
- b. Margin = -Limit + Level

For Telecommunication Port Conducted Emission

- a. Corrected Reading: ISN Factor (ISN) + Attenuator (AT/AUX) + Cable Loss (CL) + Read Level (Raw) = Level
- b. Margin = -Limit + Level
- c. For Current method Calculation : $\text{dB}\mu\text{A} + 20 \cdot \log_{10}(50 \Omega) = \text{dBuV}$

4.4. Typical Test Setup Layout of Conducted Emission and disturbances at telecommunication ports

4.5. Test Result of AC Power Ports

Refer as Appendix A

4.6. Test Result of Telecommunication Ports

Refer as Appendix B

5. Test of Radiated Emission

5.1. Limit

Radiated Emission below 1 GHz test at 10 m:

Frequency (MHz)	QP (dBuV/m)
30~230	40
230~1,000	47

Radiated Emission above 1 GHz test at 3 m:

Frequency (MHz)	PK (dBuV/m)	AV (dBuV/m)
1,000~3,000	76	56
3,000~6,000	80	60

5.2. Test Procedures

<Below 1 GHz>:

- The EUT was placed on a rotatable table top 0.8 meter above ground.
- The EUT was set 10 meters from the interference receiving antenna which was mounted on the top of a variable height antenna tower.
- The table was rotated 360 degrees to determine the position of the highest radiation.
- The antenna is a half wave dipole and its height is varied between one meter and four meters above ground to find the maximum value of the field strength both horizontal polarization and vertical polarization of the antenna are set to make the measurement.
- For each suspected emission the EUT was arranged to its worst case and then tune the antenna tower (from 1 M to 4 M) and turn table (from 0 degree to 360 degrees) to find the maximum reading.
- Set the test-receiver system to Peak Detect Function and specified bandwidth with Maximum Hold Mode.
- If the emission level of the EUT in peak mode was 3 dB lower than the limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method and reported.

<Above 1 GHz>:

- a. Same test set up as below 1 GHz radiated testing.
- b. The EUT was set 3 meters from the interference-receiving antenna which was mounted on the top of a variable height antenna tower.
- c. There should be absorber placed between the EUT and Antenna and its located size should let the test site meet CISPR16-1-4 requirement.
- d. The table was rotated 360 degrees to determine the position of the highest radiation.
- e. Set the test-receiver system to Peak Detect Function and specified bandwidth with Maximum Hold Mode.
- f. Set the DRG Horn Antenna at 1M height, then run the turn table to get the maximum noise reading from Horizontal and Vertical polarity separately.
- g. When EUT locating on the turn-table, and its height is over 172 cm (Antenna's 3dB beam width of 6 GHz is 27°), the DRG Horn Antenna must be raised up and descended down, then turning around the turn-table to get the maximum noise reading of the Horizontal and Vertical polarity separately. Note the maximum raise up height is same as the top of EUT.
- h. If emission level of the EUT in peak mode was 20 dB lower than average limit (that means the emission level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.

5.3. Measurement Results Calculation

The measured Level is calculated using:

- a. Corrected Reading: Antenna factor (AF) + Cable loss (CL) + Read level (Raw) - Preamp factor (PA) = Level
- b. Margin = -Limit + Level

5.4. Typical Test Setup Layout of Radiated Emission

<Below 1 GHz>:

<Above 1 GHz>:

Remark : When EUT height is over 172cm , H max = Top of EUT

5.5. Test Result of Radiated Emission

Refer as Appendix C

6. General Performance Criteria Description of Immunity Test

For EN 301 489-1

CT / CR (Criterion A)	<p>Performance criteria for continuous phenomena applied to transmitters and receivers</p> <p>During and after the test, the apparatus shall continue to operate as intended. No degradation of performance or loss of function is allowed below a permissible performance level specified by the manufacturer when the apparatus is used as intended. In some cases this permissible performance level may be replaced by a permissible loss of performance.</p> <p>During the test the EUT shall not unintentionally transmit or change its actual operating state and stored data.</p>
TT / TR (Criterion B)	<p>Performance criteria for transient phenomena applied to transmitters and receivers</p> <p>After the test, the apparatus shall continue to operate as intended. No degradation of performance or loss of function is allowed below a permissible performance level specified by the manufacturer, when the apparatus is used as intended. In some cases this permissible performance level may be replaced by a permissible loss of performance.</p>
TT / TR (Criterion C)	<p>Only for voltage interruption</p> <p>Performance criteria for transient phenomena applied to transmitters and receivers</p> <p>In the case where the equipment is powered solely from the AC mains supply (without the use of a parallel battery back-up) volatile user data may have been lost and if applicable the communication link need not to be maintained and lost functions should be recoverable by user or operator.</p>

For EN 55024

According to Clause 7.1 of EN 55024 standard, the following describes the general performance criteria.

Criterion A (Note 1)	<p>During and after the test the EUT shall continue to operate as intended without operator intervention.</p> <p>No degradation of performance or loss of function is allowed below a minimum performance level specified by the manufacturer when the EUT is used as intended.</p>
Criterion B (Note 2)	<p>During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test.</p> <p>After the test, the equipment shall continue to operate as intended without operator intervention.</p> <p>For xDSL Terminal equipment:</p> <p>During the test shall not cause the system to lose the established connection or retrain.</p> <p>At the cessation of the test, the system shall operate in the condition established prior to the application of the test without user intervention.</p>
Criterion C	<p>Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions.</p> <p>Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.</p>

Note 1 : No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

Note 2 : After the application of the phenomenon below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is allowed. However, no change of operating state if stored data is allowed to persist after the test. If the minimum performance level (or the permissible performance loss) is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.

For EN 55035

According to Clause 8 of EN 55035 standard, the following describes the general performance criteria.

Criterion A (Note 1)	<p>During and after the test the EUT shall continue to operate as intended without operator intervention.</p> <p>No degradation of performance or loss of function is allowed below a minimum performance level specified by the manufacturer when the EUT is used as intended.</p> <p>Requirements for CPE containing xDSL ports :</p> <p>With the impulsive noise applied:</p> <p>The modem shall operate without retraining and without SES at the bit rate established prior to the application of the impulsive noise. No extra CRC errors shall occur due to the impulsive noise.</p>								
Criterion B (Note 2)	<p>During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test.</p> <p>After the test, the equipment shall continue to operate as intended without operator intervention.</p> <p>For xDSL equipment :</p> <ul style="list-style-type: none"> - For EFT Test (xDSL or AC mains power port): the CRC error count shall not have increased by more than 600 when compared to the count prior to the application of the test. - Broadband impulse noise disturbances, isolated : During the test shall not cause the system to lose the established connection or retrain. At the cessation of the test, the system shall operate in the condition established prior to the application of the test without user intervention. <table border="1" data-bbox="456 1008 1474 1330"> <thead> <tr> <th>Impulse duration ms</th><th>Performance criteria</th></tr> </thead> <tbody> <tr> <td>0.24</td><td>The application of the impulse shall not cause the xDSL link to lose synchronisation. No CRC errors are permitted.</td></tr> <tr> <td>10</td><td>The application of the 5 impulses shall result in less than 75 CRC errors and shall not cause the link to lose synchronisation.</td></tr> <tr> <td>300</td><td>The application of the impulse shall not cause the xDSL link to lose synchronisation.</td></tr> </tbody> </table>	Impulse duration ms	Performance criteria	0.24	The application of the impulse shall not cause the xDSL link to lose synchronisation. No CRC errors are permitted.	10	The application of the 5 impulses shall result in less than 75 CRC errors and shall not cause the link to lose synchronisation.	300	The application of the impulse shall not cause the xDSL link to lose synchronisation.
Impulse duration ms	Performance criteria								
0.24	The application of the impulse shall not cause the xDSL link to lose synchronisation. No CRC errors are permitted.								
10	The application of the 5 impulses shall result in less than 75 CRC errors and shall not cause the link to lose synchronisation.								
300	The application of the impulse shall not cause the xDSL link to lose synchronisation.								
Criterion C	<p>Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions.</p> <p>Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.</p>								
<p>Note 1 : No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.</p> <p>Note 2 : After the application of the phenomenon below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is allowed. However, no change of operating state if stored data is allowed to persist after the test. If the minimum performance level (or the permissible performance loss) is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.</p>									

7. EUT Performance Criteria

Applicable Standard: EN 301 489-1 V2.2.3 (2019-11)	
Test Type	Pass Criterion
Electrostatic discharge immunity test $\pm 2, 4$ kV Contact Discharge $\pm 2, 4, 8$ kV Air Discharge Standard Criterion B	A
Radiated immunity test Frequency Range : 80 MHz to 6,000 MHz Electromagnetic field : 3 V/m (unmodulated, r.m.s) Amplitude modulated : 80 % AM (1 kHz) Standard Criterion A	A
Electrical fast transient / burst immunity test DC ports 5/50 ns, ± 0.5 kV, 5 kHz I/O ports 5/50 ns, ± 0.5 kV, 5 kHz Standard Criterion B	A
Surge immunity test DC ports (1.2/50 us) : ± 0.5 kV Telecommunication/Signal ports : indoor (1.2/50 us) : ± 0.5 kV Standard Criterion B	A
Conducted immunity test Frequency Range : 150 kHz to 80 MHz Electromagnetic field : 3 V (unmodulated, r.m.s) Amplitude modulated : 80 % AM (1 kHz) Standard Criterion A	A
Voltage dips, short interruptions and voltage variations immunity tests 1. Dip 0% residual 10 ms (0.5 cycles) – Standard Criterion B	N/A
2. Dip 0% residual 20 ms (1.0 cycles) – Standard Criterion B	N/A
3. Dip 70% residual 500 ms (25 cycles) – Standard Criterion C	N/A
4. Interruption 0% residual 5000 ms (250 cycles) – Standard Criterion C	N/A

Applicable Standard: EN 55024:2010+A1:2015	
Test Type	Pass Criterion
Electrostatic discharge immunity test ± 2, 4 kV Contact Discharge ± 2, 4, 8 kV Air Discharge Standard Criterion B	A
Radiated immunity test Frequency Range : 80 MHz to 1,000 MHz Amplitude modulated : 80 % AM (1 kHz) Electromagnetic field : 3 V/m (unmodulated, r.m.s) Standard Criterion A	A
Electrical fast transient / burst immunity test DC ports 5/50 ns, ± 0.5 kV, 5 kHz I/O ports 5/50 ns, ± 0.5 kV, 5 kHz Standard Criterion B	A
Surge immunity test DC ports : ± 0.5 kV Standard Criterion B	A
Conducted immunity test Frequency Range : 150 kHz to 80 MHz Amplitude modulated : 80 % AM (1 kHz) Electromagnetic field : 3 V (unmodulated, r.m.s) Standard Criterion A	A
Power frequency magnetic field immunity test 1 A/m, 50 Hz Standard Criterion A	A
Voltage dips, short interruptions and voltage variations immunity tests 1. >95% reduction 10 ms (0.5 cycles) – Standard Criterion B	N/A
2. 30% reduction 500 ms (25 cycles) – Standard Criterion C	N/A
3. Interruption >95% reduction 5,000 ms (250 cycles) – Standard Criterion C	N/A

Applicable Standard: EN 55035:2017+A11:2020	
Test Type	Pass Criterion
Electrostatic discharge immunity test \pm 2, 4 kV Contact Discharge \pm 2, 4, 8 kV Air Discharge Standard Criterion B	A
Radiated immunity test Swept test Frequency Range : 80 MHz to 1,000 MHz Spot test 1,800 MHz / 2,600 MHz / 3,500 MHz / 5,000 MHz Electromagnetic field : 3 V/m (unmodulated, r.m.s) Amplitude modulated : 80 % AM (1 kHz) Standard Criterion A	A
Electrical fast transient / burst immunity test DC ports 5/50 ns, \pm 0.5 kV, 5 kHz I/O ports 5/50 ns, \pm 0.5 kV, 5 kHz Standard Criterion B	A
Surge immunity test DC ports : \pm 0.5 kV Standard Criterion B	A
Conducted Immunity test Frequency Range / Electromagnetic field : 150 kHz to 10 MHz / 3 V (unmodulated, r.m.s) 10 MHz to 30 MHz / 3 to 1 V (unmodulated, r.m.s) 30 MHz to 80 MHz / 1 V (unmodulated, r.m.s) Amplitude modulated : 80 % AM (1 kHz) Standard Criterion A	A
Broadband impulse noise disturbances, repetitive Impulse frequency / Test level 0.15 MHz to 0.5 MHz / 107 dBuV 0.5 MHz to 10 MHz / 107 dBuV to 36 dBuV 10 MHz to 30 MHz / 36 dBuV to 30 dBuV Burst duration, Burst period 0.70 ms, 10 ms Standard Criterion A	N/A
Broadband impulse noise disturbances, isolated Impulse frequency / Test level 0.15 MHz to 30 MHz / 110 dBuV Burst duration 0.24 ms, 10 ms, 300 ms Standard Criterion B	N/A
Power frequency magnetic field immunity test 1 A/m, 50 Hz Standard Criterion A	A

Voltage dips, short interruptions and voltage variations immunity tests	
1. Residual < 5% 10 ms (0.5 cycles) – Standard Criterion B	N/A
2. Residual 70% 500 ms (25 cycles) – Standard Criterion C	N/A
3. Residual < 5% 5,000 ms (250 cycles) – Standard Criterion C	N/A

8. Electrostatic Discharge Immunity Test (ESD)

8.1. Test Specification

Reference Standard	EN 61000-4-2 / IEC 61000-4-2	
Discharge Impedance	330 ohm / 150 pF	
Contact Discharge	$\pm 2, 4$ kV	
Air Discharge	$\pm 2, 4, 8$ kV	
Rise Time	0.8 ns ± 25 %	
Current at 30 ns	± 30 %	
Current at 60 ns	± 30 %	
Polarity	Positive / Negative	
Number of Discharge	For EN 301 489-1 / EN 55035	Air Discharge 20 times at each test point
		Contact Discharge 20 times at each test point
	For EN 55024	Air Discharge 20 times at each test point
		Contact Discharge 50 times at each test point
Single Discharge Mode	1 discharge per 1s	

8.2. Test Setup

The test setup consists of the test generator, EUT and auxiliary instrumentation necessary to perform DIRECT and INDIRECT application of discharges to the EUT as applicable, in the follow manner:

- CONTACT DISCHARGE to the conductive surfaces and to coupling plane;
- AIR DISCHARGE at insulating surfaces.

The preferred test method is that of type tests performed in laboratories and the only accepted method of demonstrating conformance with this standard. The EUT was arranged as closely as possible to arrangement in final installed conditions.

8.3. Test Setup for Tests Performed in Laboratory

A ground reference plane was provided on the floor of the test site. It was a metallic sheet (copper or aluminum) of 0.25 mm, minimum thickness; other metallic may be used but they shall have at least 0.65 mm thickness. In the SPORTON EMC LAB., we provided 1 mm thickness aluminum ground reference plane or 1 mm thickness stainless steel ground reference plane. The minimum size of the ground reference plane is 1 m x 1 m, the exact size depending on the dimensions of the EUT. It was connected to the protective grounding system.

The EUT was arranged and connected according to its functional requirements. A distance of 1m minimum was provided between the EUT and the wall of the lab. and any other metallic structure. In cases where this length exceeds the length necessary to apply the discharges to the selected points, the excess length shall, where possible, be placed non-inductively off the ground reference plane and shall not come closer than 0.2m to other conductive parts in the test setup.

Where the EUT is installed on a metal table, the table was connected to the reference plane via a cable with a 470k ohm resistor located at each end, to prevent a build-up of charge. The test setup was consist a wooden table, 0.8m high, standing on the ground reference plane. A HCP, 1.6 m x 0.8 m, was placed on the table. The EUT and cables was isolated from the HCP by an insulating support 0.5 mm thick. The VCP size, 0.5 m x 0.5 m.

8.4. ESD Test Procedure

- a. In the case of air discharge testing the climatic conditions shall be within the following ranges:
 - ambient temperature: 15°C to 35°C;
 - relative humidity : 30% to 60%;
 - atmospheric pressure : 86 kPa (860 mbar) to 106 kPa (1060 mbar).
- b. Test programs and software shall be chosen so as to exercise all normal modes of operation of the EUT.

The use of special exercising software is encouraged, but permitted only where it can be shown that the EUT is being comprehensively exercised.
- c. The test voltage shall be increased from the minimum to the selected test severity level, in order to determine any threshold of failure. The final severity level should not exceed the product specification value in order to avoid damage to the equipment.
- d. For the time interval between successive single discharges an initial value of one second is recommended. Longer intervals may be necessary to determine whether a system failure has occurred.
- e. In the case of contact discharges, the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.
- f. In the case of painted surface covering a conducting substrate, the following procedure shall be adopted:
 - If the coating is not declared to be an insulating coating by the equipment manufacturer, then the pointed tip of the generator shall penetrate the coating so as to make contact with the conducting substrate.
 - Coating declared as insulating by the manufacturer shall only be submitted to the air discharge.
 - The contact discharge test shall not be applied to such surfaces.
- g. In the case of air discharges, the round discharge tip of the discharge electrode shall be approached as fast as possible (without causing mechanical damage) to touch the EUT . After each discharge, the ESD generator (discharge electrode) shall be removed from the EUT. The generator is then retriggered for a new single discharge. This procedure shall be repeated until the discharges are completed. In the case of an air discharge test, the discharge switch, which is used for contact discharge, shall be closed.

8.5. Test Result

Refer as Appendix D

9. Radio Frequency Electromagnetic Field Immunity Test (RS)

9.1. Test Specification

Reference Standard	EN 61000-4-3 / IEC 61000-4-3
Frequency Range	For EN 301 489-1: 80 MHz to 6,000 MHz
	For EN 55024: 80 MHz to 1,000 MHz
	For EN 55035:
	Swept test : 80 MHz to 1,000 MHz Spot test : 1800 MHz / 2600 MHz / 3500 MHz / 5000 MHz
Field Strength	3 V/m (un-modulated, r.m.s) 80% AM (1 kHz)
Frequency Step	1 %
Dwell Time	2.9 sec
Antenna Polarity	Vertical / Horizontal

9.2. Test Setup

The procedure defined in this part requires the generation of electromagnetic fields within which the test sample is placed and its operation observed. To generate fields that are useful for simulation of actual (field) conditions may require significant antenna drive power and the resultant high field strength levels.

9.3. Test Procedure

- a. The equipment to be tested is placed in the center of the enclosure on a wooden table. The equipment is then connected to power and signal leads according to pertinent installation instructions.
- b. The bilog antenna which is enabling the complete frequency range of below 1GHz / above 1GHz is placed 3m away from the equipment. The required field strength is determined by placing the field strength meter(s) on top of or directly alongside the equipment under test and monitoring the field strength meter via a remote field strength indicator outside the enclosure while adjusting the continuous-wave to the applicable antennae.
- c. The test is normally performed with the generating antenna facing each of four sides of the EUT. The polarization of the field generated by the broadband (bilog) antenna necessitates testing each position twice, once with the antenna positioned vertically and again with the antenna positioned horizontally.
- d. At each of the above conditions, the frequency range is swept 80-6,000 MHz (Spot test: 1800 MHz / 2600 MHz / 3500 MHz / 5000 MHz), pausing to adjust the R.F. signal level or to switch oscillators and antenna. The rate of sweep is in the order of 1.5×10^{-3} decades/s. The sensitive frequencies or frequencies of dominant interest may be discretely analyzed.
- e. If need to use the exclusion band, for different equipment should be referenced as below:

The exclusion band for 2.4 GHz equipment was from 2280 MHz to 2603.5 MHz.

The exclusion band for 5 GHz equipment was from 4880 MHz to 5995 MHz.

The exclusion band for 5.8 GHz equipment was from 5455 MHz to 6000 MHz.

9.4. Test Result

Refer as Appendix D

10. Electrical Fast Transient/Burst Immunity Test (EFT/BURST)

10.1. Test Specification

Reference Standard	EN 61000-4-4 / IEC 61000-4-4
Test Voltage	DC Power Line: ± 0.5 kV
	Telecommunication/Signal Line: ± 0.5 kV
Polarity	Positive / Negative
Rise time of the pulses	5 ns
Impulse duration	50 ns
Burst duration	15 ms for 5 kHz / 0.75ms for 100 kHz
Burst period	300 ms
Impulse Frequency	For EN 301 489-1 / EN 55035: Power: 5 kHz Telecommunication/Signal: 5 kHz
	For EN 55024: Power: 5 kHz Telecommunication/Signal: 5 kHz
Duration	1 min

10.2. Test Setup

IEC 645/12

The EUT was placed on a ground reference plane and was insulated from it by an insulating support about 0.1m thick. If the EUT is table-top equipment, it was located approximately 0.8 m above the GRP.. The GRP. Was a metallic sheet (copper or aluminum) of 0.25 mm ,minimum thickness; other metallic may be used but they shall have at least 0.65 mm thickness. It shall project beyond the EUT by at least 0.1 m on all sides and connected to the protective earth. In the SPORTON EMC LAB. We provided 1 mm thickness aluminum ground reference plane or 1 mm thickness stainless steel ground reference plane. The minimum size of the ground reference plane is 1 m x 1 m, the exact size depending on the dimensions of the EUT. It was connected to the protective grounding system. The EUT was arranged and connected according to its functional requirements. The minimum distance between the EUT and other conductive structures, except the GRP. Beneath the EUT, was more than 0.5 m. Using the coupling clamp, the minimum distance between the coupling plates and all other conductive structures, except the GRP. Beneath the EUT, was more than 0.5 m. The length of the signal and power lines between the coupling device and the EUT was 0.5m or less.

10.3. Test Procedure

- a. In order to minimize the effect of environmental parameters on test results, the climatic conditions when test is carrying out shall comply with the following requirements:
 - ambient temperature: 15°C to 35°C;
 - relative humidity : 45% to 75%;
 - atmospheric pressure : 86 kPa (860 mbar) to 106 kPa (1060 mbar).
- b. In order to minimize the effect of environmental parameters on test results, the electromagnetic environment of the laboratory shall not influence the test results.
- c. The variety and diversity of equipment and systems to be tested make it difficult to establish general criteria for the evaluation of the effects of fast transients/bursts on equipment and systems.
- d. The test results may be classified on the basic of the operating conditions and the functional specification of the equipment under test, according to the following performance criteria :
 - Normal performance within the specification limits.
 - Temporary degradation or loss of function or performance which is self-recoverable.
 - Temporary degradation or loss of function or performance which requires operator intervention or system reset.
 - Degradation or loss of function which is not recoverable due to damage of equipment (components).

10.4. Test Result

Refer as Appendix D

11. Surge Immunity Test

11.1. Test Specification

Reference Standard	EN 61000-4-5 / IEC 61000-4-5
Test Voltage	DC Power Port: ± 0.5 kV
	For EN 301 489-1: Indoor Telecommunication/Signal Port: ± 0.5 kV
Polarity	Positive / Negative
Wave Shape	For EN 301 489-1: Power Port: 1.2/50 μ s Open-circuit voltage 8/20 μ s Short-circuit current Telecommunication/Signal port: 1.2/50 μ s Open-circuit voltage 8/20 μ s Short-circuit current
	For EN 55024: Power Port: 1.2/50 μ s Open-circuit voltage 8/20 μ s Short-circuit current
	For EN 55035: Power Port: 1.2/50 μ s Open-circuit voltage 8/20 μ s Short-circuit current
Phase Angle	0° , 90° , 180° , 270°
Time between successive pulses	60 sec.
Number of test	5 positive and 5 negative

11.2. Test Setup

11.3. Test Procedure

a. Climatic conditions

The climatic conditions shall comply with the following requirements :

- ambient temperature : 15 °C to 35 °C
- relative humidity : 10 % to 75 %
- atmospheric pressure : 86 kPa to 106 kPa (860 mbar to 1060 mbar)

b. Electromagnetic conditions

The electromagnetic environment of the laboratory shall not influence the test results.

c. The test shall be performed according the test plan that shall specify the test set-up with

- generator and other equipment utilized;
- test level (voltage/current);
- generator source impedance;
- internal or external generator trigger;
- number of tests: at least five positive and five negative at the selected points;
- repetition rate: maximum 1/min.
- inputs and outputs to be tested;
- representative operating conditions of the EUT;
- sequence of application of the surge to the circuit;
- phase angle in the case of a.c. power supply;
- actual installation conditions, for example :
 - AC : neutral earthed,
 - DC : (+) or (-) earthed to simulated the actual earthing conditions.

d. If not otherwise specified the surges have to be applied synchronized to the voltage phase at the zero-crossing and the peak value of the a.c. voltage wave (positive and negative).

e. The surges have to be applied line to line and line(s) and earth. When testing line to earth, the test voltage has to be applied successively between each of the lines and earth, if there is no other specification.

f. The test procedure shall also consider the non-linear current-voltage characteristics of the equipment under test. Therefore the test voltage has to be increased by steps up to the test level specified in the product standard or test plan.

g. If the actual operating signal sources are not available, they may be simulated. Under no circumstances may the test level exceed the product specification. The test shall be carried out according to the test plan.

h. To find all critical points of the duty cycle of the equipment, a sufficient number of positive and negative test pulses shall be applied. For acceptance test a previously unstressed equipment shall be used to the protection devices shall be replaced.

11.4. Test Result

Refer as Appendix D

12. Conducted Disturbances Induced by Radio-Frequency Field Immunity Test (CS)

12.1. Test Specification

Reference Standard	EN 61000-4-6 / IEC 61000-4-6
Frequency Range / Field Strength	For EN 301 489-1 / EN 55024: 150 kHz to 80 MHz / 3 V (unmodulated, r.m.s) Amplitude modulated : 80 % AM (1 kHz) For EN 55035: 150 kHz to 10 MHz / 3 V (unmodulated, r.m.s) 10 MHz to 30 MHz / 3 to 1 V (unmodulated, r.m.s) 30 MHz to 80 MHz / 1 V (unmodulated, r.m.s) Amplitude modulated : 80 % AM (1 kHz)
Frequency Step	1 %
Dwell Time	2.9 sec
Coupling mode	CDN M016(M2), CDN T8-10, CDN T800

12.2. Test Setup

12.3. Test Procedure

- a. The EUT shall be operated within its intended climatic conditions. The temperature and relative humidity should be recorded.
- b. This test method test can be performed without using a self-shielded enclosure. This is because the disturbance levels applied and the geometry of the setups are not likely to radiated a high amount of energy, especially at the lower frequencies. If under certain circumstances the radiated energy is too high, a shielded enclosure has to be used.
- c. The test shall be performed with the test generator connected to each of the coupling and decoupling devices in turn while the other non-excited RF-input ports of the coupling devices are terminated by a 50 ohm load resistor.
- d. The frequency range is swept from 150 kHz to 80 MHz, using the signal levels established during the setting process, and with the disturbance signal 80% amplitude modulated with a 1kHz sinewave, pausing to adjust the RF-signal level or to switch coupling devices as necessary. The rate of sweep shall no exceed 1.5×10^{-3} decades/s. Where the frequency is swept incrementally, the step size shall no exceed 1% of the start and thereafter 1% of the preceding frequency value.
- e. The dwell time at each frequency shall not be less than the time necessary for the EUT to be exercised, and able to respond. Sensitive frequencies e.g. clock frequency(ies) and harmonics or frequencies of dominant interest shall be analyzed separately.
- f. In cases of dispute, the test procedure using a step size not exceeding 1% of the start and thereafter 1% of preceding frequency value shall take precedence.
- g. Attempts should be made to fully exercise the EUT during testing, and to fully interrogate all exercise modes selected for susceptibility.
- h. The use of special exercising programs is recommended.
- i. Testing shall be performed according to a Test Plan, which shall be included in the test report.
- j. It may be necessary to carry out some investigatory testing in order to establish some aspects of the test plan.

12.4. Test Result

Refer as Appendix D

13. Power Frequency Magnetic Field Immunity Tests

13.1. Test Specification

Reference Standard	IEC 61000-4-8
Power Frequency	50 Hz
Field Strength	1 A/m
Observation type	1 min
Inductance Coil	1 m x 1 m

13.2. Test Setup

13.3. Test Procedure

- The equipment is configured and connected to satisfy its functional requirements.
- The power supply, input and output circuits shall be connected to the sources of power supply, control and signal.
- The cables supplied or recommended by the equipment manufacturer shall be used. 1 meter of all cables used shall be exposed to the magnetic field.

13.4. Test Result

Refer as Appendix D

1 Test Result of ESD Immunity

Test Mode	Mode 1~2
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17 EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Direct Application :

Test Point	Tested Voltage (kV)	Contact Discharge (Performance Criteria)	Air Discharge (Performance Criteria)
1	±2,4,8	-	A
2~15	±2,4	A	-

Indirect Application :

Coupling Plan	Coupling Side	Test Voltage (kV)	Performance Criteria
HCP	Front / Rear / Right / Left	± 2, 4	A
VCP	Front / Rear / Right / Left	± 2, 4	A

Test Mode	Mode 3
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17 EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

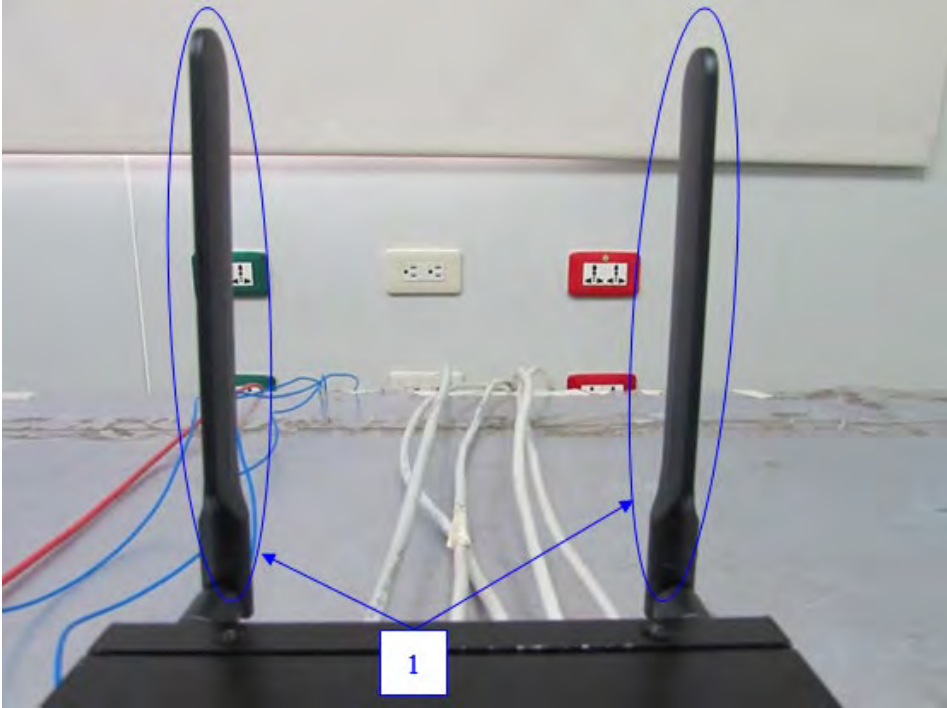

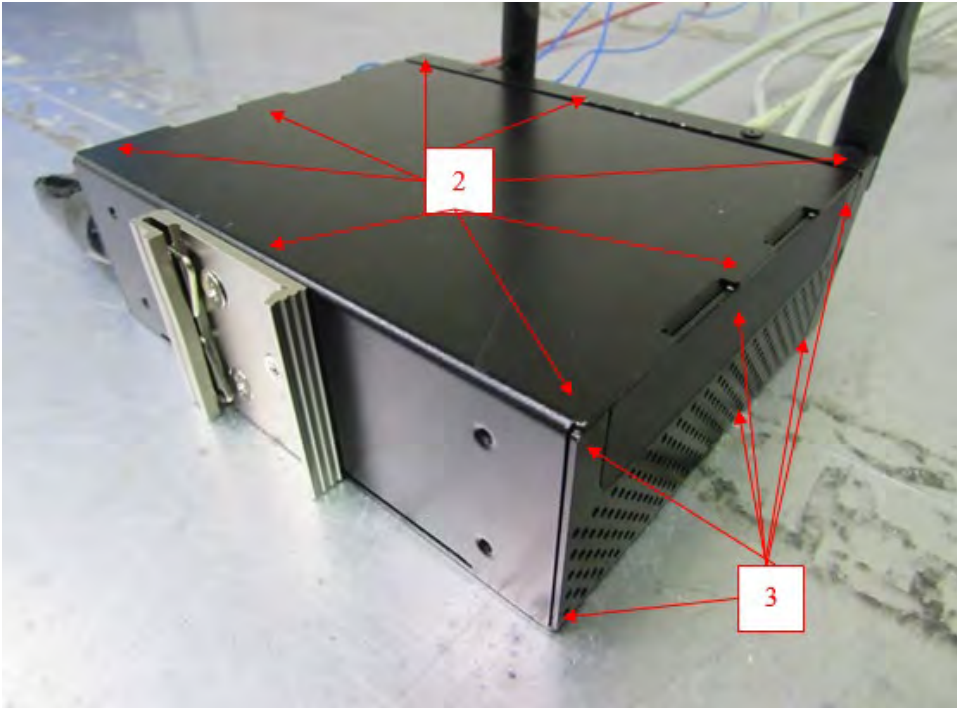

Direct Application :

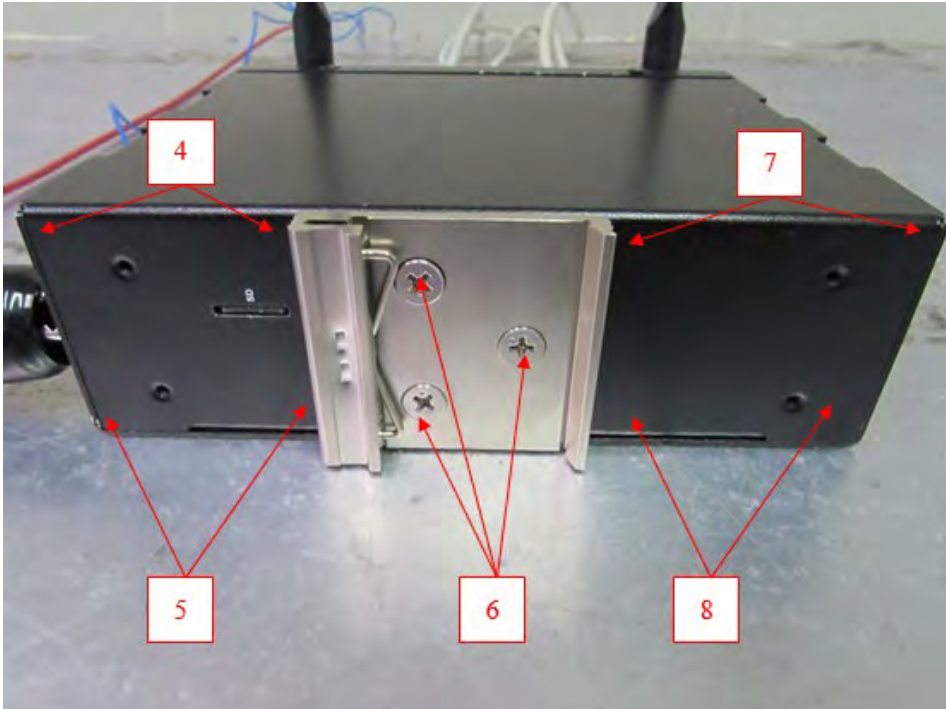

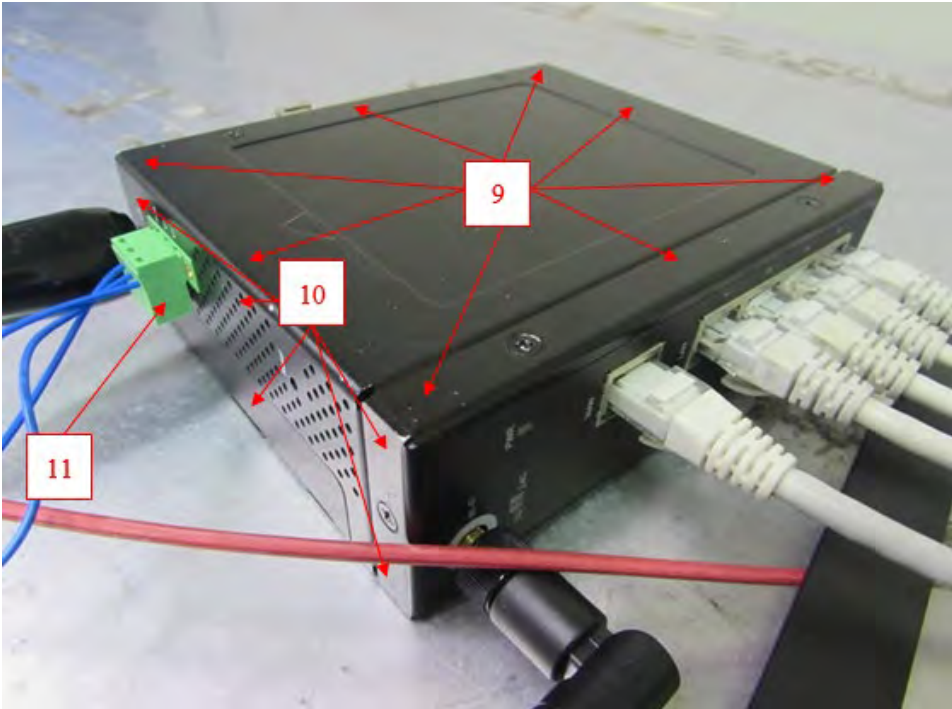

Test Point	Tested Voltage (kV)	Contact Discharge (Performance Criteria)	Air Discharge (Performance Criteria)
1	±2,4,8	-	A
2~14	±2,4	A	-

Indirect Application :

Coupling Plan	Coupling Side	Test Voltage (kV)	Performance Criteria
HCP	Front / Rear / Right / Left	± 2, 4	A
VCP	Front / Rear / Right / Left	± 2, 4	A

Test mode: Mode 1

2 Test Result of RS Immunity

Test Mode	Mode 1~3
Standard	Required Criteria A
Test Standard	EN 301 489-1 EN 301 489-17
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	Field V/m	Antenna Polarization	EUT Face Exposed	Performance Criteria
80~6,000	3	Vertical	Front/Back/Right/Left	A
80~6,000	3	Horizontal	Front/Back/Right/Left	A

Test Mode	Mode 1~3
Standard	Required Criteria A
Test Standard	EN 55024
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	Field V/m	Antenna Polarization	EUT Face Exposed	Performance Criteria
80~1,000	3	Vertical	Front/Back/Right/Left	A
80~1,000	3	Horizontal	Front/Back/Right/Left	A

Test Mode	Mode 1~3
Standard	Required Criteria A
Test Standard	EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	Field V/m	Antenna Polarization	EUT Face Exposed	Performance Criteria
80~1,000	3	Vertical	Front/Back/Right/Left	A
80~1,000	3	Horizontal	Front/Back/Right/Left	A
1800	3	Vertical	Front/Back/Right/Left	A
1800	3	Horizontal	Front/Back/Right/Left	A
2600	3	Vertical	Front/Back/Right/Left	A
2600	3	Horizontal	Front/Back/Right/Left	A
3500	3	Vertical	Front/Back/Right/Left	A
3500	3	Horizontal	Front/Back/Right/Left	A
5000	3	Vertical	Front/Back/Right/Left	A
5000	3	Horizontal	Front/Back/Right/Left	A

3 Test Result of EFT

Test Mode	Mode 1~2
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17 EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

DC Power Port :

Phase	Test Voltage (kV)
	±0.5 kV
Positive	A
Negative	A
Positive- Negative	A

Telecommunication Port :

Telecommunication Port	Test Voltage (kV)
	±0.5 kV
WAN port	A
LAN port 1	A

Test Mode	Mode 3
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17 EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Telecommunication Port :

Telecommunication Port	Test Voltage (kV)
	± 0.5 kV
WAN port	A
LAN port 1	A
LAN port 4	A

4 Test Result of Surge

Test Mode	Mode 1
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17
Test Recorded	There was no abnormal situation during the test compared with initial operation.

DC Power Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	P - N	+	A
		—	A

Telecommunication Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	WAN port (indoor)	+	A
		—	A
0.5	LAN port 1 (indoor)	+	A
		—	A

Test Mode	Mode 1
Standard	Required Criteria B
Test Standard	EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

DC Power Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	P - N	+	A
		—	A

Test Mode	Mode 2
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17
Test Recorded	There was no abnormal situation during the test compared with initial operation.

DC Power Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	P - N	+	A
		—	A

Telecommunication Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	WAN port (indoor)	+	A
		—	A
0.5	LAN port 1 (indoor)	+	A
		—	A
0.5	LAN port 4 (indoor)	+	A
		—	A

Test Mode	Mode 2
Standard	Required Criteria B
Test Standard	EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

DC Power Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	P - N	+	A
		—	A

Test Mode	Mode 3
Standard	Required Criteria B
Test Standard	EN 301 489-1 EN 301 489-17
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Telecommunication Port:

Voltage (kV)	Test Location	Polarity	Performance Criteria
0.5	WAN port (indoor)	+	A (offline)
		—	A (offline)
0.5	LAN port 1 (indoor)	+	A (offline)
		—	A (offline)
0.5	LAN port 4 (indoor)	+	A (offline)
		—	A (offline)

5 Test Result of CS Immunity

Test Mode	Mode 1~2
Standard	Required Criteria A
Test Standard	EN 301 489-1 EN 301 489-17 EN 55024
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	V (r.m.s)	CDN	Coupling port	Performance Criteria
0.15 ~ 80	3	M016(M2)	DC	A
0.15 ~ 80	3	T8-10	WAN port_1Gbps	A
0.15 ~ 80	3	T8-10	LAN port1_1Gbps	A

Test Mode	Mode 1~2
Standard	Required Criteria A
Test Standard	EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	V (r.m.s)	CDN	Coupling port	Performance Criteria
0.15 ~ 10	3	M016(M2)	DC	A
10 ~ 30	3 - 1			A
30 ~ 80	1			A
0.15 ~ 10	3	T8-10	WAN port_1Gbps	A
10 ~ 30	3 - 1			A
30 ~ 80	1			A
0.15 ~ 10	3	T8-10	LAN port 1_1Gbps	A
10 ~ 30	3 - 1			A
30 ~ 80	1			A
10 ~ 30	3 - 1			A
30 ~ 80	1			A

Test Mode	Mode 3
Standard	Required Criteria A
Test Standard	EN 301 489-1 EN 301 489-17 EN 55024
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	V (r.m.s)	CDN	Coupling port	Performance Criteria
0.15 ~ 80	3	T8-10	WAN port_1Gbps	A
0.15 ~ 80	3	T8-10	LAN port 1_1Gbps	A
0.15 ~ 80	3	T8-10	LAN port 4_1Gbps	A

Test Mode	Mode 3
Standard	Required Criteria A
Test Standard	EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Frequency Range MHz	V (r.m.s)	CDN	Coupling port	Performance Criteria
0.15 ~ 10	3	T8-10	WAN port_1Gbps	A
10 ~ 30	3 - 1			A
30 ~ 80	1			A
0.15 ~ 10	3	T8-10	LAN port 1_1Gbps	A
10 ~ 30	3 - 1			A
30 ~ 80	1			A
0.15 ~ 10	3	T8-10	LAN port 4_1Gbps	A
10 ~ 30	3 - 1			A
30 ~ 80	1			A
10 ~ 30	3 - 1			A
30 ~ 80	1			A

6 Test Result of MF Immunity

Test Mode	Mode 1~2
Standard	Required Criteria A
Test Standard	EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Power Frequency Magnetic Field	Testing duration	Coil Orientation	Performance Criteria
50 Hz, 1 A/m	1.0 Min	X-axis	A
50 Hz, 1 A/m	1.0 Min	Y-axis	A
50 Hz, 1 A/m	1.0 Min	Z-axis	A

Test Mode	Mode 3
Standard	Required Criteria A
Test Standard	EN 55024 EN 55035
Test Recorded	There was no abnormal situation during the test compared with initial operation.

Power Frequency Magnetic Field	Testing duration	Coil Orientation	Performance Criteria
50 Hz, 1 A/m	1.0 Min	X-axis	A
50 Hz, 1 A/m	1.0 Min	Y-axis	A
50 Hz, 1 A/m	1.0 Min	Z-axis	A
